

- Wood Fuel Supply
- Wood Heat Contracts

## WHY WOOD HEAT ?

- Our Wood Chip Fuel is the lowest cost fuel available
- Wood Fuel is Carbon Neutral, and does not contribute to Climate Change
- Wood Fuel contributes to rural economic regeneration
- Wood Fuel is a secure, local source of Energy

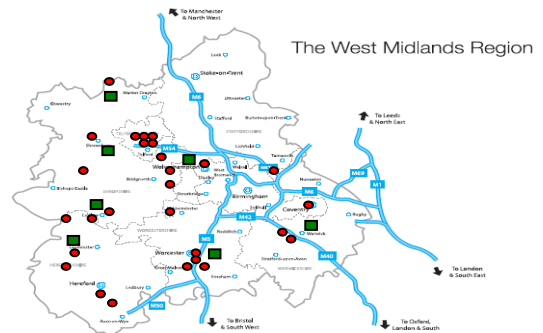

## THE MIDLANDS WOOD FUEL APPROACH

Midlands Wood Fuel Ltd is the West Midlands leading supplier of high quality wood chip fuel to the Biomass Heating Market. Here's why:

### 1. Depots

Midlands Wood Fuel operate from local depots distributed through the area. Currently we have seven covering the region.

Timber is delivered to the depots for outside storage which allows it to dry to around 25% moisture content. All of our timber is clean, untreated virgin timber.

### 2. Chipping

Our 'Mus-Max' *Wood Terminator 8* is a high output mobile industrial chipper that is built specifically to produce high grade consistent wood chips for the heating market. This is essential for reliable boiler operation.

### 3. Storage

Our chips are stored in barns to keep them dry and free from contamination. At any one time, we have at least six months worth of dry fuel available which means we never run out, even during unexpected cold snaps.

### 4. Delivery

We have various means of delivering our wood chip fuel to our customers. At most sites we now use our chip tanker from which we pump the fuel along flexible hose direct into the boiler hopper, just like an oil tanker. We are the first UK wood heating company to utilise a chip tanker. At larger sites we utilise tipped deliveries or removable hook lift containers

### 5. Payment and Contracts

Midlands Wood Fuel Ltd is a wood energy services company, which means that as well as fuel supply, we supply and install boilers, either directly or with our national partners Eenergy.

At such sites, most customers prefer to utilise our Heat Contracts. With Heat Meters installed on the boilers, the customer pays a monthly heating bill, rather than paying per load or per tonne. This is preferable, as it puts the onus on us to provide good quality dry fuel, and to ensure the boiler is well maintained and running efficiently, and it gives our clients the comfort of long term supply at fixed prices.
